Get the exterior lighting you need

Time for specialist lighting

Get the exterior lighting you need, right on time, with installations that exactly match your design requirements. When the time comes, replace outdated lighting and reduce running costs to gain a return on your investment. Over time, benefit from reactive and scheduled maintenance to safeguard exterior lighting performance. Talk to NR Hardy about your exterior lighting needs. We've spent 25 years, providing timely exterior lighting support.

NR Hardy installs new exterior lighting schemes, completes LED refits and lighting upgrades and provides a reliable maintenance service. We can help to make your commercial spaces safer, more appealing, energy-efficient and profitable.

Led by business owner and engineer, Neil Hardy, we're a close-knit and straightforward team of expert electrical engineers. We operate from London to Birmingham and all areas of southern England. Our service has been pre-screened to save you procurement hassles. We're a registered Constructionline contractor, NICEIC approved and we're registered as compliant with the Highways Electrical Registration Scheme (HERS) for lighting and lit signs.

Reliable service

From installation, through to maintenance and testing, our service enables you to meet statutory obligations and maximize the potential of your properties. Our engineers can handle innovative lighting schemes, demanding maintenance projects and everyday lighting requirements.

- Car park, retail and industrial park, and commercial lighting
- Lantern and gear conversions including LED upgrades
- Conduit, cable tray, trunking and meter hub installation
- Tunnel, underpass and subway lighting
- Reactive and planned preventative maintenance
- Street furniture replacement and installation
- Private network jointing and terminating
- Electrical testing at prescribed statutory intervals
- Festive lighting installation and removal
- Emergency lighting
- Maintenance, testing and installation of landlords communal power supplies

Challenging & ornamental lighting

LED refit for Thames Piers

When the lighting for Tower, Blackfriars and Bankside millennium piers needed improvement, NR Hardy completed this technically challenging cabling and high IP LED refit. Work was completed overnight with piers restored to public use by 6am each day. PAR sensors were installed to control each light and optimise energy efficiency.

Maintenance of riverside walkway

The Crown Reach residential development is located beside the Thames near Vauxhall bridge. Our engineers were called upon to maintain the ornamental lighting on the weather-exposed, pedestrian walkway which forms part of the Thames Path. Works included an upgrade of the decorative lamps and essential lighting repairs to ensure in-light reliability.

Billingsgate architectural lighting

The Traffic Light Tree, is an 8-metre high public sculpture, designed by Pierre Vivant. It had been removed from its original Docklands site following road improvements. The artwork was re-installed by NR Hardy in Billingsgate including cabling, traffic light heads and 75 sets of computer-controlled lights. The red, green and amber lights are randomly sequenced to reflect the frenetic rhythm of London life.

Piccadilly lighting upgrade

Existing lighting infrastructure had come to the end of its economic life at the Piccadilly underpass in London. N.R Hardy installed temporary lighting to enable the decommissioning and removal of the original lighting and the installation and commissioning of the new LED lighting arrangement.

Upgrades & architectural lighting

Meter hub for Clacton depot

NR Hardy was asked to upgrade the old lighting scheme at this industrial estate and goods depot. Work included running cables from the feeder pillar across the roof structure despite the persistent seagull hazard. A meter hub was installed to enable separate energy supply and billing to individually leased units.

Architectural lights in New Cross

As part of a £4 million redevelopment project, NR Hardy installed architectural lighting for this pedestrian subway in New Cross. The floral artwork in galvanised steel was designed by local artist Heather Burrell. The design was backlit with colour-changing DALI controlled LEDs.
